

Local support 'the European way'

Eniac Development Centre

Eniac is a division of Imtech

Bridging the gap between local and international

Development and customizations related to your ERP system can be quite a challenge. You want to be able to control the quality of the software, manage the costs and get things done the right way. The more your ERP systems are distributed across Europe, the more difficult it is to stay in charge. At Eniac we help you solve this problem effectively by providing European services with the necessary local touch.

A familiar situation

You may recognize the situation: you have just rolled out your new or updated ERP system and need development expertise for customizations and interfaces. You start working with local partners, leading to a variety of customizations which are difficult to maintain and manage. In addition cost control is not easy and interoperability between sites can become a problem. What you need is a European partner with a local touch. With its Development Centre Eniac has helped various companies overcome the challenge of operating consistently across sites in Europe.

Focus

The Eniac Development Centre helps clients throughout Europe get more out of their investment in their Infor/IBM platforms. The centre focuses exclusively on clients who deploy Infor solutions on IBM System i. With its in-depth knowledge of the Infor and IBM technology and its wide experience in helping clients in different industries the Development Centre offers customers reliable and controllable development services, either remote or onsite.

One stop shop

One of the main advantages of the Eniac Development Centre is its one stop shop concept, providing one point of contact for all your development needs throughout Europe. You don't have to worry any longer about managing all kinds of customizations and interfaces at all the individual sites where you deploy ERP systems. The Development Centre helps you to standardize your customizations, resulting in lower costs of development and maintenance and a better grip on your IT operations.

Proven development tools

Using proven, state of the art development tools, including RPG/LE, AS/SET and Java, we provide reliable and solid software that supports you in continuously improving your business processes and bottom line. The Development Centre is also able to help you make your data accessible to many by using the break-through IBM Websphere technology.

Solid approach

The Eniac Development Centre combines in-depth knowledge and expertise with a solid approach towards development. In every phase of the development process we make sure your requirements and needs remain key. In addition all steps are documented. Milestones are defined and software is extensively tested. Our main concern is to provide you with all the solutions and customizations you need to improve your operations and enhance your competitive edge.

References

Various companies have asked our Development Centre to help them to get more return out of their investments in Infor and IBM technology. We helped packaging manufacturer Greif to consolidate to a central ERP system, making it easier to keep a grip on purchasing and stock levels. Elopak, also in the packaging branch, selected Eniac to improve its European operations by developing tools for connecting the marketing organisation in Switzerland, Hungary, Czech Republic and Austria to the different European production sites.

European presence

The Eniac Development centre is part of Eniac ERP Services, that focuses on the Infor solutions on the IBM System i platform. Eniac is part of Imtech NV, a European technical services provider in the fields of electrical engineering, ICT and mechanical engineering. Imtech, with approximately 17.000 employees, achieves an annual revenue of nearly 3 billion euro. With offices throughout Europe it is able to support a wide variety of multinational companies who profit from one single point of contact for all their technology needs.
